                                                              "YSKI, a novel mammalian protein kinase structurally related to St and SPS1, but is not involved in the known MAPK pathways."; Oncogene 14:2047-2057(1997).

-i- FUNCTION: OXIDANT STRESS-ACTIVATED SERINE/THREONINE KINASE THE MAY PLAY A ROLE IN THE RESPONSE TO ENVIRONMENTAL STRESS.

-i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-i- ENZYME REGULATION: ACTIVATED BY PHOSPHOYRYLATION, PROBABLY AUTOPHOSPHORYLATION. THE C-TERMINAL NON-CATALYTIC REGION INHII THE KINASE ACTIVITY.

-i- SUBCELIQUAR LOCATION: Cytoplasmic.

-i- TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED. HIGHEST LEVELS ARI FOUND IN TESTIS, LARGE INTESTINE, BRAIN AND STOMACH FOLLOWED I

Biol. Chem. 270:25070-25078(1995).
1: FUNCTION: THE ACTIVARED KINASE ACTS ON A VARIETY OF TARGETS.
1: SUBUNIT: INTERACTS TIGHTLY WITH GTP-BOUND BUT NOT GDP-BOUND CDC42/P21 AND RAC1. SHOWS HIGHLY SPECIFIC BINDING TO THE SH3 DOMAINS OF PHOSPHOLIPASE C-GAMMA AND OF ADAPTER PROTEIN NCK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Mammalia; Eutheria; Rodentia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: THE ACTIVATED KINASE ACTS ON A VARIETY OF TARGETS.
SUBUNIT: INTERACTS TIGHTLY WITH GTP-BOUND BUT NOT GDP-BOUND
CDC42/P21 AND RAC1. SHOWS HIGHLY SPECIFIC BINDING TO THE SH3
DOMAINS OF PHOSPHOLIPASE C-GAMMA AND OF ADAPTER PROTEIN NCK.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN POSTMITOTIC NEURONS O
DEVELOPING AND POSTMATAL CEREBRAL CORTEX AND HIPPOCAMPUS.
PTM: AUTOPHOSPHORYLATED MHEN ACTIVATED BY CDC42/P21.
DISEASE: DEFECTS IN PAK3 ARE A CAUSE OF AN X-LINKED FORM OF
NONSYNDROMIC MENTAL RETARDATION (MRX30).
                                                                                                                                                                                                                                                                                                                                           s SWISS-PROT entry is copyright. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
